

Our Healthcare system can not meet the needs of the growing aging population and rising disease rates. **Accessible care is more urgent than ever.** Peak Medical provides the **essential care** needed, now and for the future.

Healthcare System Challenges

Skyrocketing Costs

The healthcare system is drowning—skyrocketing costs, extending waitlists, and limited access to care are what we face today.

Limited Access

Patients face long waitlists and to receiving timely and appropriate care.

System Overload

Healthcare providers are struggling to meet demand with current resources and infrastructure.

Sources: World Health Organisation, Grand View Research. Australian Federal Priority/Health 2025.

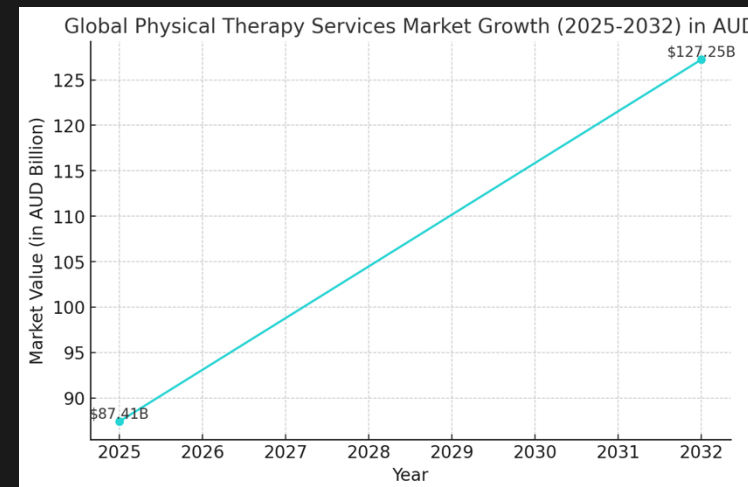

The number of individuals globally (users) accessing physical therapy for age-related issues, mobility impairments, chronic diseases, recovery, or injury is significantly growing. Not only for direct treatment in response to a condition but with high growth in preventative use.

2.4 billion people globally today have a condition requiring Physical therapy

World Health Organization. (2021, March 17). *Rehabilitation*. World Health Organization. <https://www.who.int/news-room/fact-sheets/detail/rehabilitation>

Market Growth

The global physical therapy services market is projected to grow from an estimated **AUD \$87 billion in 2025** to **AUD \$127 billion** by 2032, reflecting a compound annual growth rate (CAGR) of 5.5%. This growth is driven by factors such as an aging population and the increasing prevalence of chronic diseases, both of which heighten the need for physical therapy services.

The Care Gap

Essential Treatment

Physical therapy is essential for preventing and recovering from all these conditions

Access Barriers

Often inaccessible, especially when frequent and follow-up sessions are needed

Vulnerable Populations

The aging, injured, and surgical recovery patients are most affected. We rely on our health systems to look after us, but it does not have the people power or budget to deliver the amount, or frequency of care we require. We have a major supply/demand issue. The global senior care market will reach \$2.5T by 2030. Osteoarthritis therapeutics alone will be \$16B. Current solutions can't support growing patient needs.

MARKET DRIVERS

Urgent Need

Systems and insurers need solutions now

Government Funding

\$1.8B to address waitlists in Australia

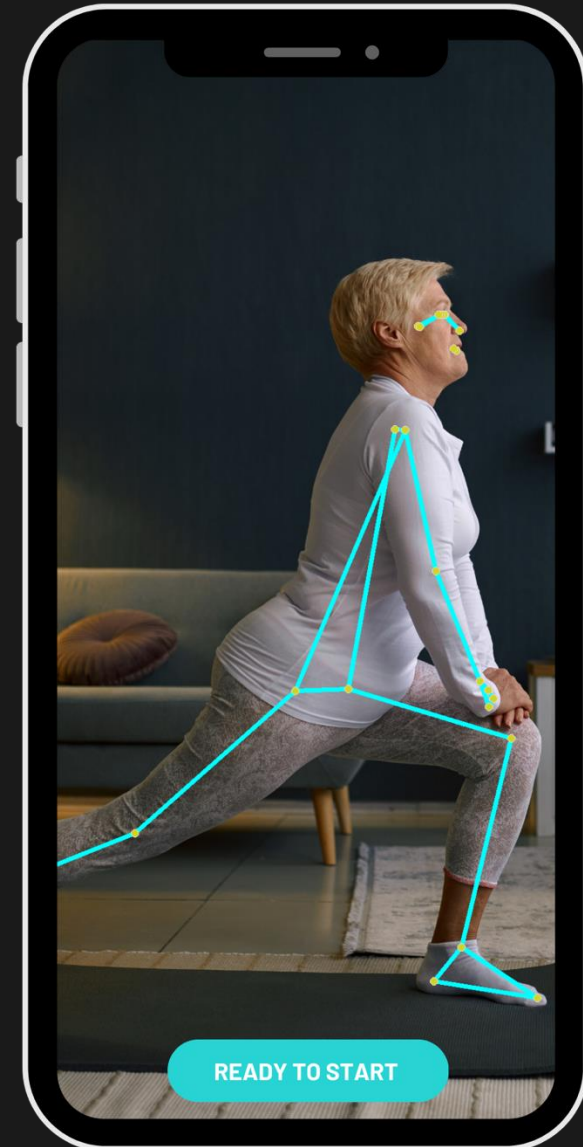

Aging Population

Tech-familiar demographic seeking solutions

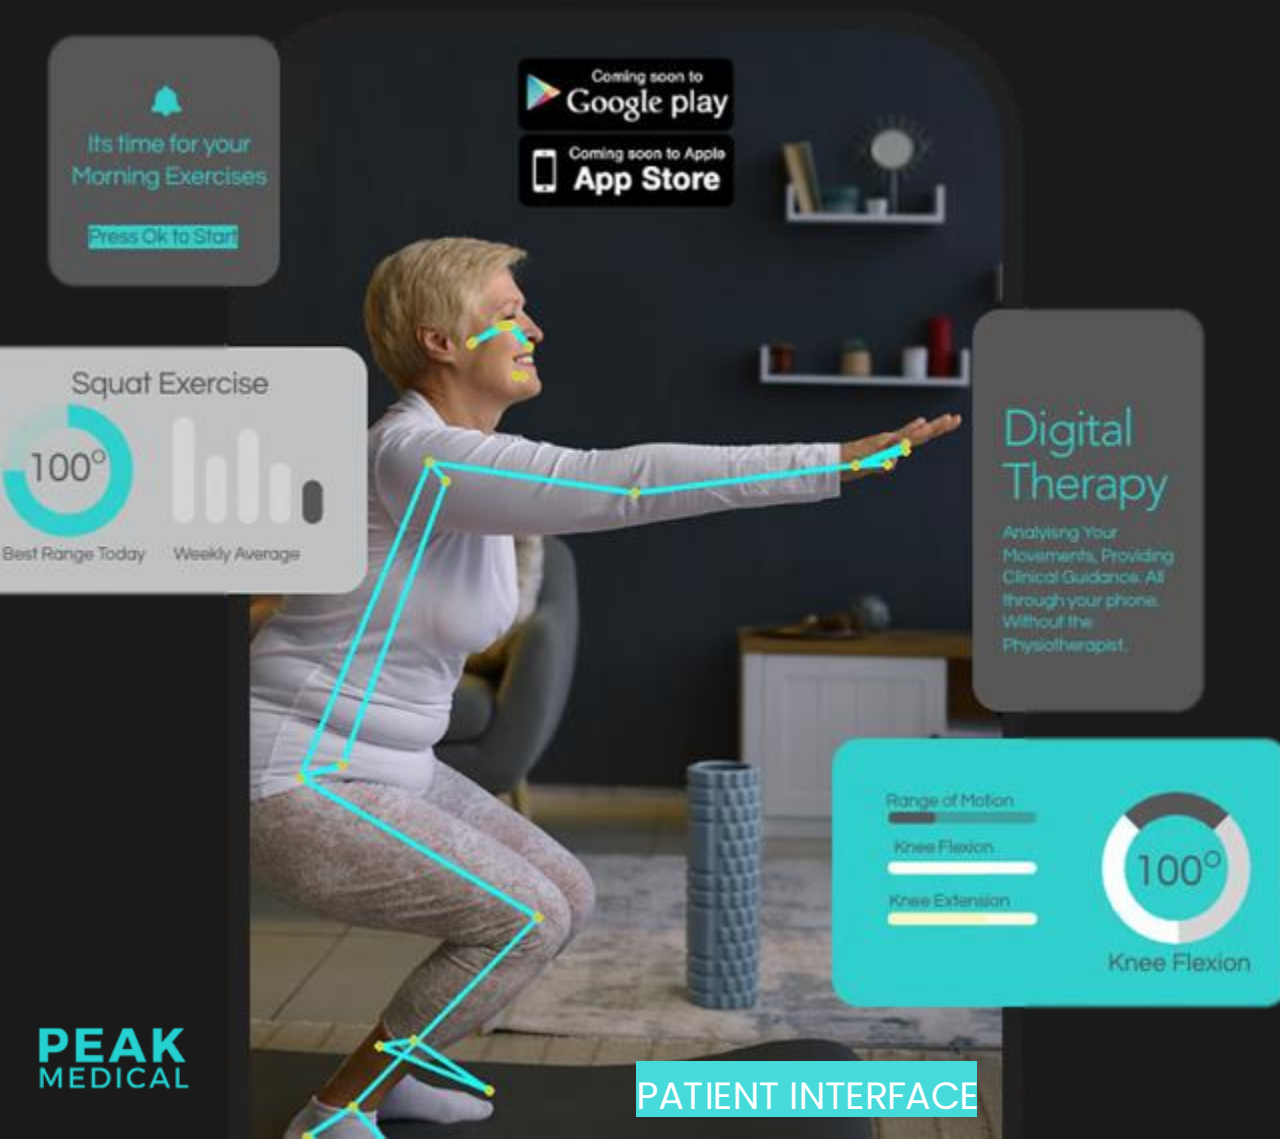

APAC Leadership

Peak Medical leading regional expansion

SOLUTION

PEAK
MEDICAL

PATIENT INTERFACE

Meet Peak's At-Home Ai Solution

Convenient & High Frequency

Access anytime, anywhere. Only your phone is needed.

Proven

As effective as in-person therapy

Engaging

Higher adherence, more completed sessions

Responds Live

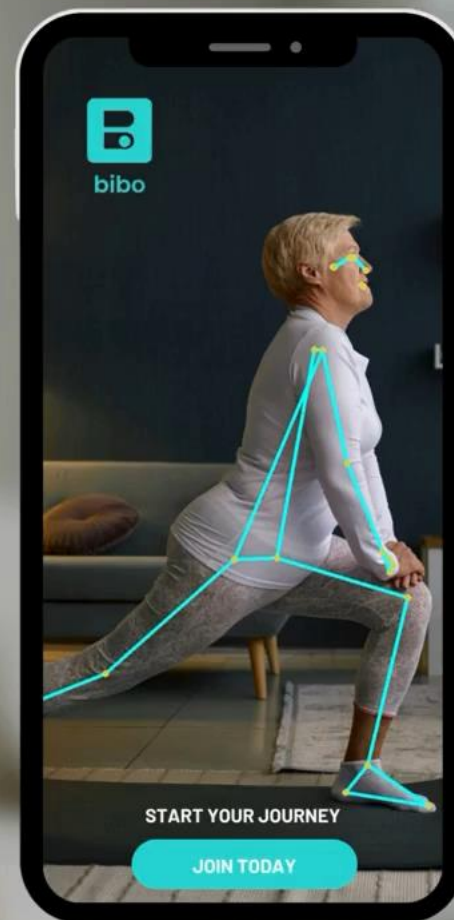

Monitors and adapts in real-time

USE CASE

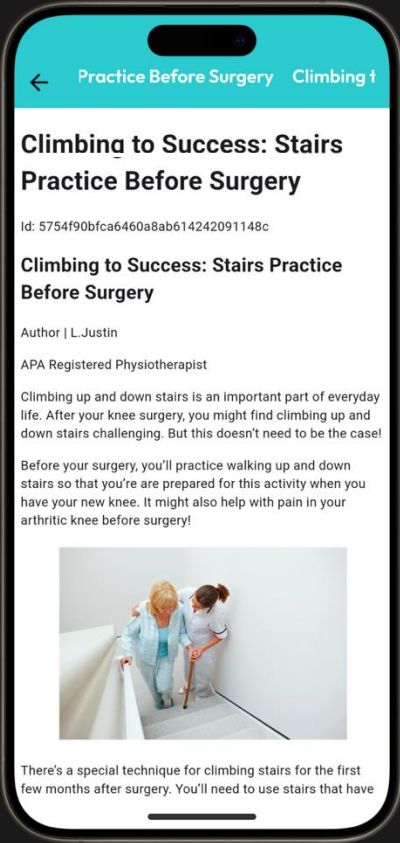

INTRODUCING

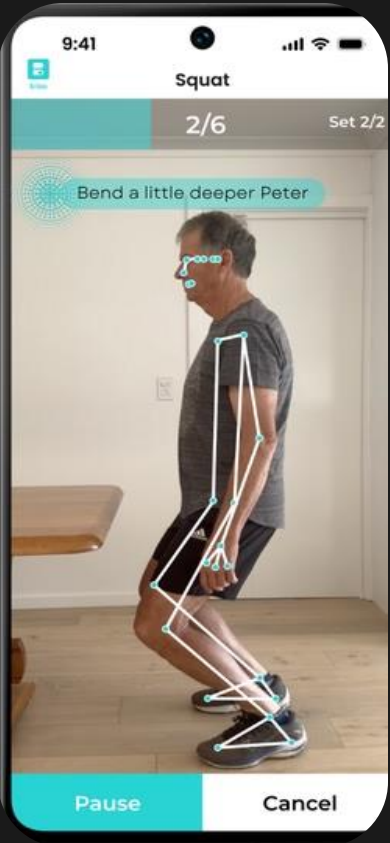

[PLAY VIDEO NOW](#)

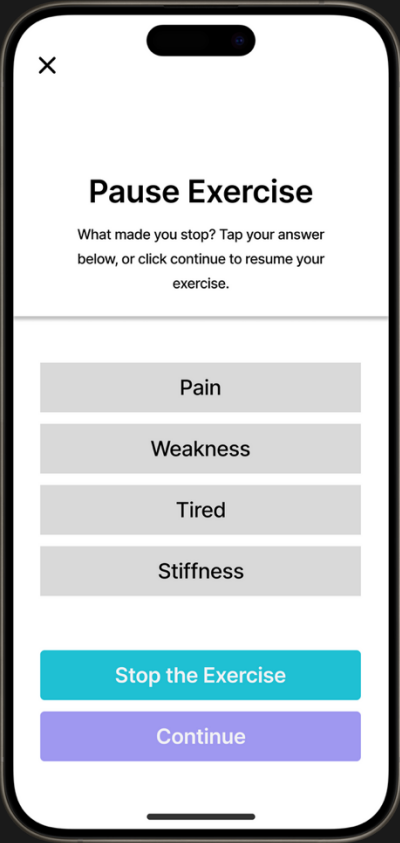

SOLUTION – PATIENT INTERFACE

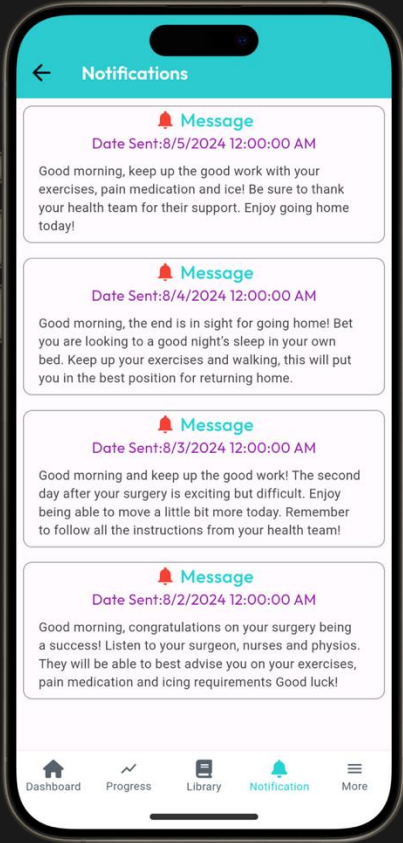

Education Library & Clinical Chat for one way communication

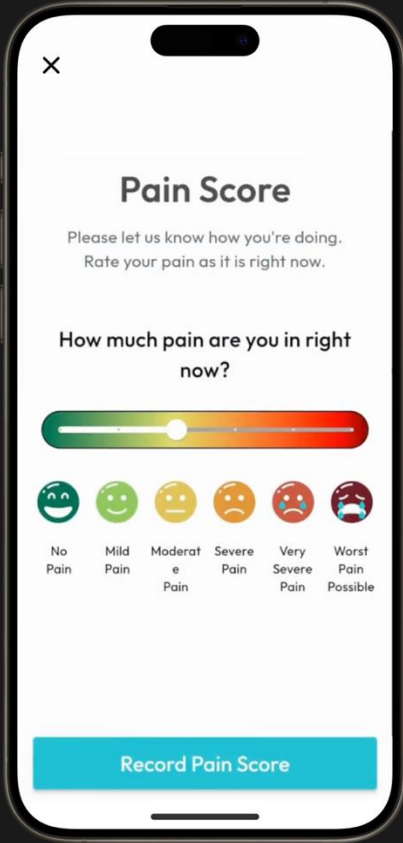

Real time Voice Feedback Corrects wrong Movement. Guides Patient through a prescribed program.

Clinical Pathway & Issues detected Live responses given to safely progress the patient

Notifications, Reminders & Surveys from Customer - keeps patient on track and connected to Hospital & Insurer check-ins

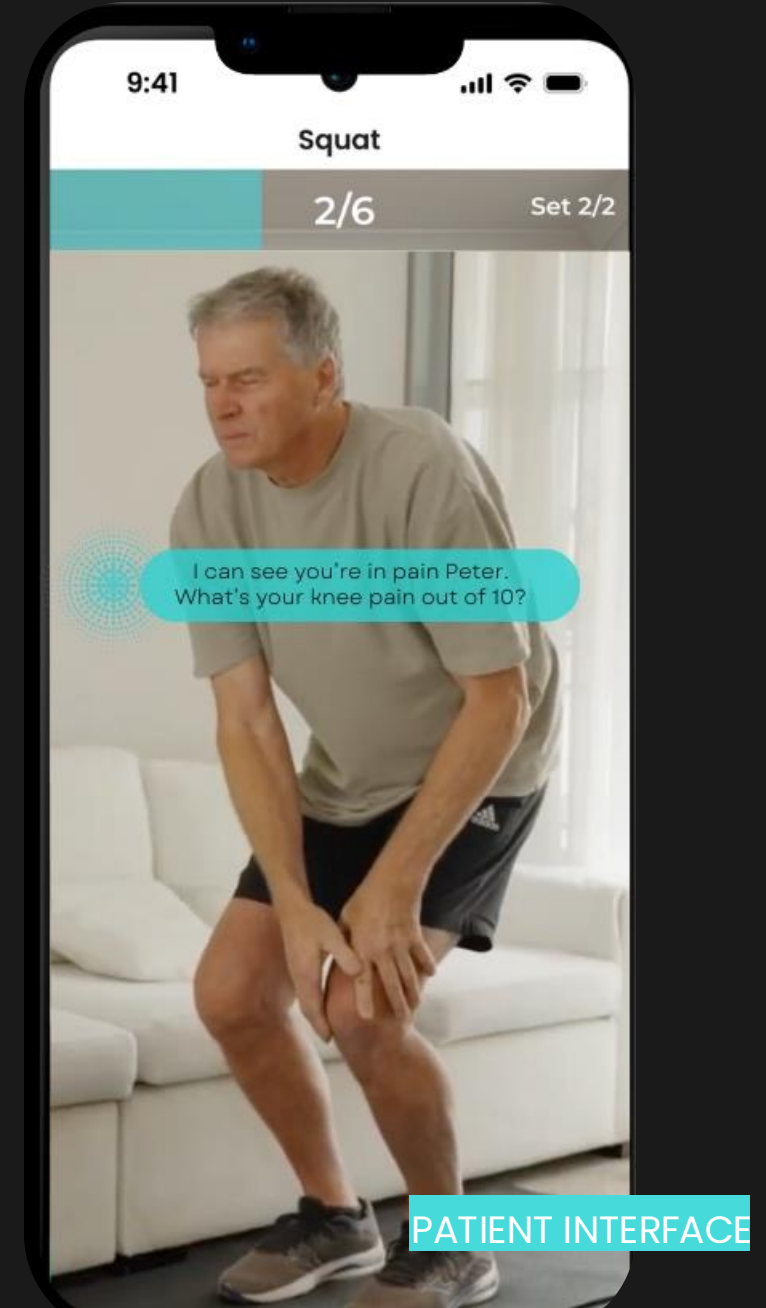

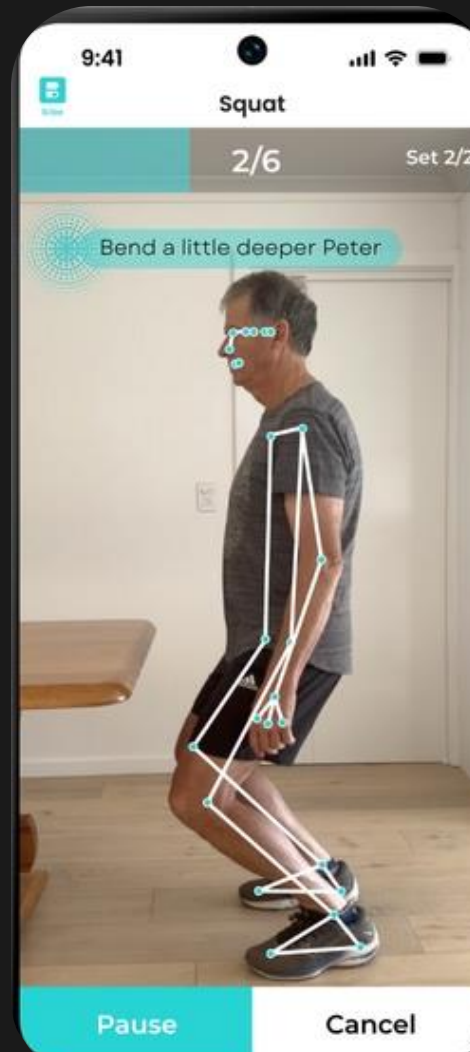

Patient Satisfaction, experience and Clinical Scores eg.VAS (Pain Score) & DASS (Anxiety Score)

SOLUTION – ISSUE DETECTION

Meet Peter. Peter is using the World First Real-Time Pain, Movement & Symptom Detection System – **Bringing the In-Clinic Experience Home, to recover from his knee surgery.**

Our technology detects issues, corrects movement and tracks user progress for greatest adherence in the patient's home. **Issue Detection** detects pain and other symptoms during their home recovery. The system responds to the issue by guiding the patient verbally, live, to a safer exercise or activity. Keeping the patient moving safely and meeting the patient where they are at in their recovery.

Rewriting How Patients Access Clinical Care to Meet the Needs of an Aging Population, Chronic Conditions, and Growing Healthcare Demands.

Peak Medical is revolutionising at-home healthcare by delivering a high-regulation, in-clinic quality experience that ensures better recovery outcomes. Peaks TGA designed products provides AI-driven clinical guidance, offering patients the expert care they need at home. Peak Medical empowers patients with the precision and support usually reserved for in-clinic care, driving higher adherence and faster recovery. Most importantly Peak Medical makes this level of in-clinic care affordable and available at scale.

1

Real-Time Symptom & Pain Detection – In-Clinic Offering At-Home through AI

Peak Medical offers low-cost, high-quality healthcare solutions that make it easy for patients to access professional-grade rehabilitation and pain management from home, without the financial burden of traditional in-clinic visits. This is made possible through the design pushing their product into a higher class regulatory category than competitors.

2

TGA-Regulated Readmission Reducer: Catching problems early

As a TGA Class2A solution, Peak Medical is the only product on the market allowed to give clinical guidance and that can measure critical metrics like range of motion on patient at home. For the first time from home we can pick up early symptoms avoiding extra surgery or adverse events for the patient and Hospital. Our products can measure (only made possible with the Class 2A regulation).

3

COST: Affordable & Accessible

We have positioned to change the access problem and to be a solution that meets the needs of the growing, aging population. Through using Software versus a hardware solution we can provide a cost-effective clinical solution at scale. We re 17.5 times more affordable than the current health model. Peak is the only price-sensitive solution positioned for market uptake across the Asia Pacific (a price-sensitive geography).

Our customers below Pay Peak Medical – Not the Patient

Through a B2B model, we serve hospitals, health insurers, and self-insurers (customers) by offering a reimbursable product that increases their revenue through cost savings. Our solution reduces their expenses paid on costly traditional physical therapy by serving as a digital clinical substitute.

Health Insurers

Health insurers benefit from Peak's system by reducing their costs through substituting or supplementing in our digital therapeutic program over traditional care. We improve recovery outcomes, providing scalable, data-driven, and accessible care.

Hospitals

Hospitals benefit from Peak's system by reducing readmissions via our early detection system, by streamlining recovery, and improving outcomes with remote, personalised rehabilitation. Our product will reduce length of stay, freeing up beds for other surgeries, providing a scalable digital ecosystem across multiple conditions & sites.

Self-Insurers

A growing new market across the APAC regions, where Peak supports workers' compensation claims. Self-insurers use us to track injuries, improve recovery, reduce costs, and ensure compliance. Peak offers remote rehabilitation, speeding recovery, and enabling faster claim resolution while lowering long-term expenses.

Patient Access

1

Enrollment

Provider(Hospital or Insurer) sends link, patient registers.

Initial Assessment by Health Professional

Tailored program prescribed in App

Therapy Begins

Hospital Access

Insurer Access

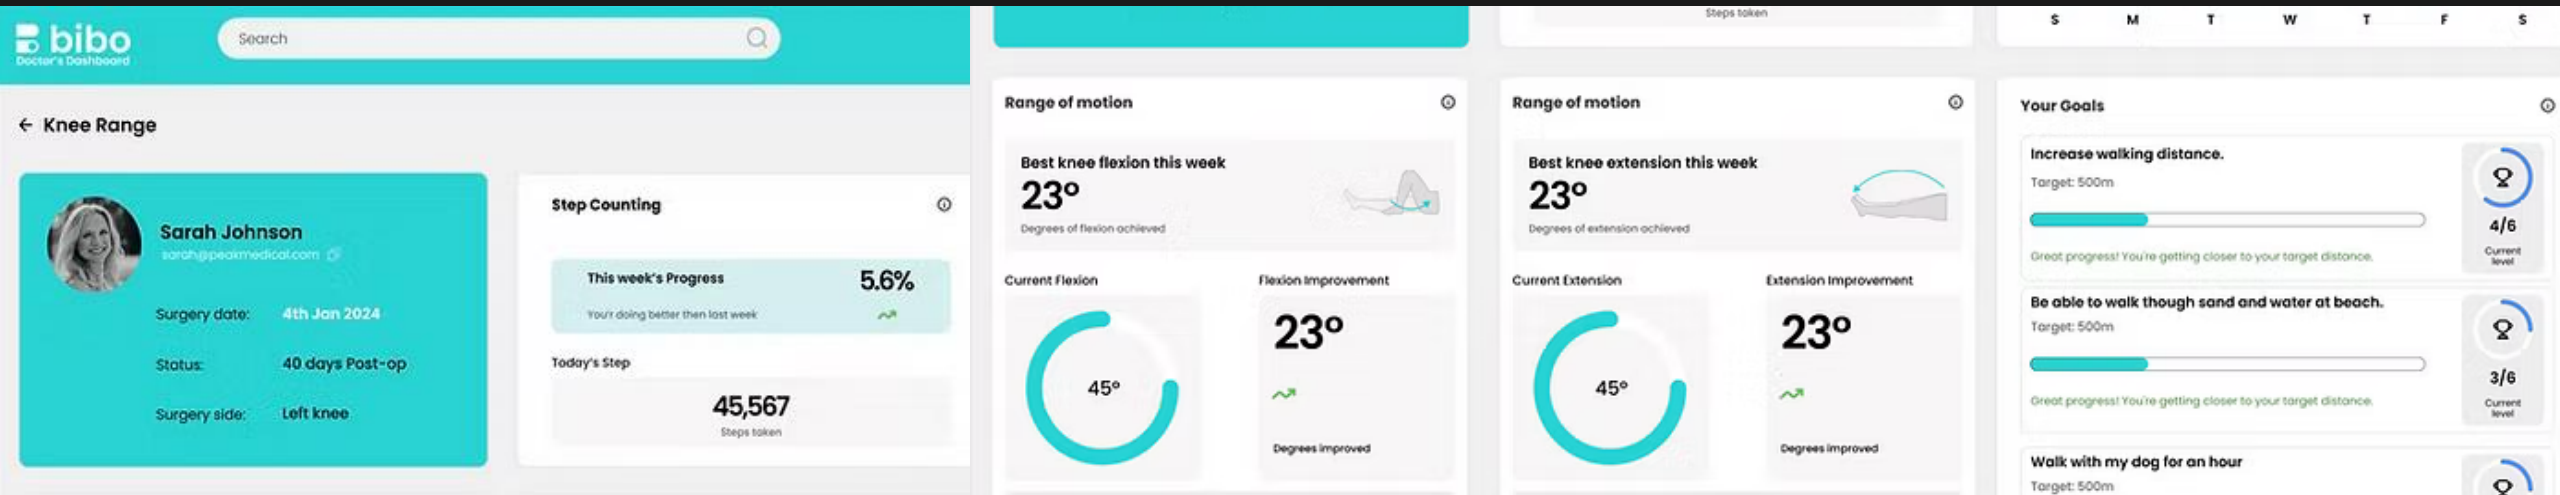

Peak Medical is an Integrated Digital Platform

The Customer selects modules required to serve their patients (see modules below that represent growth, scale opportunity and access for our customers). The Total Knee Replacement product is ready to go live. Across 2025 – 2030 we are focused on serving our customers with three modules: Our Total Knee Replacement, Total Hip Replacement and Osteoarthritis modules to serve a target of ~441,000 end users via our B2B pipeline by 2030. We can rapidly expand to meet the needs of our customers, with a 12-week lead time to activate other modules, deploying our core proprietary technology to a new module.

Adult & Pediatric Surgeries			Aged Care	Sports	Osteoarthritis	Other
Total Knee Replacement	Total Hip Replacement	Shoulder + Spine Surgery	Health Span	Soft Tissue Injuries	Mobility & Management	Workers Comp
Cardiac	Pulmonary	Oncology	Falls	Performance Enhancement	Pain Mgmt	Veterans Affairs & Defence

Modules

Health Professionals from within our Hospitals and Insurers, prescribe & remotely manage patients from Peaks integrated data platform.

CUSTOMER INTERFACE

Continuous Monitoring
For quality care.
No wearables needed.

AI Analysis
Rapid program optimisation with clinical Ai suggestions.
Lessening the admin burden.

Remote Adjustments
Modify programs based on data. Freeing up Hospital foot traffic.

Patient data collated and summarised
Shorter follow-ups frees up Health professional time, allowing time for new patients.

Benefit

Common Value propositions across customers.

Expanded Reach

Serve remote patients. See patient progress in real-time, spot adherence patterns, and for critical tasks that are missed - prevent complications before they happen.

Improved Efficiency

AI handles routine care, freeing provider time

Data-Driven Insights

Aggregated trends improve diagnostic precision

Enhanced Care at Lower Cost

Evidence-based therapy with increased touchpoints that meet the growing Aging population and chronic disease care needs.

Longer duration of care offered at lowered costs.

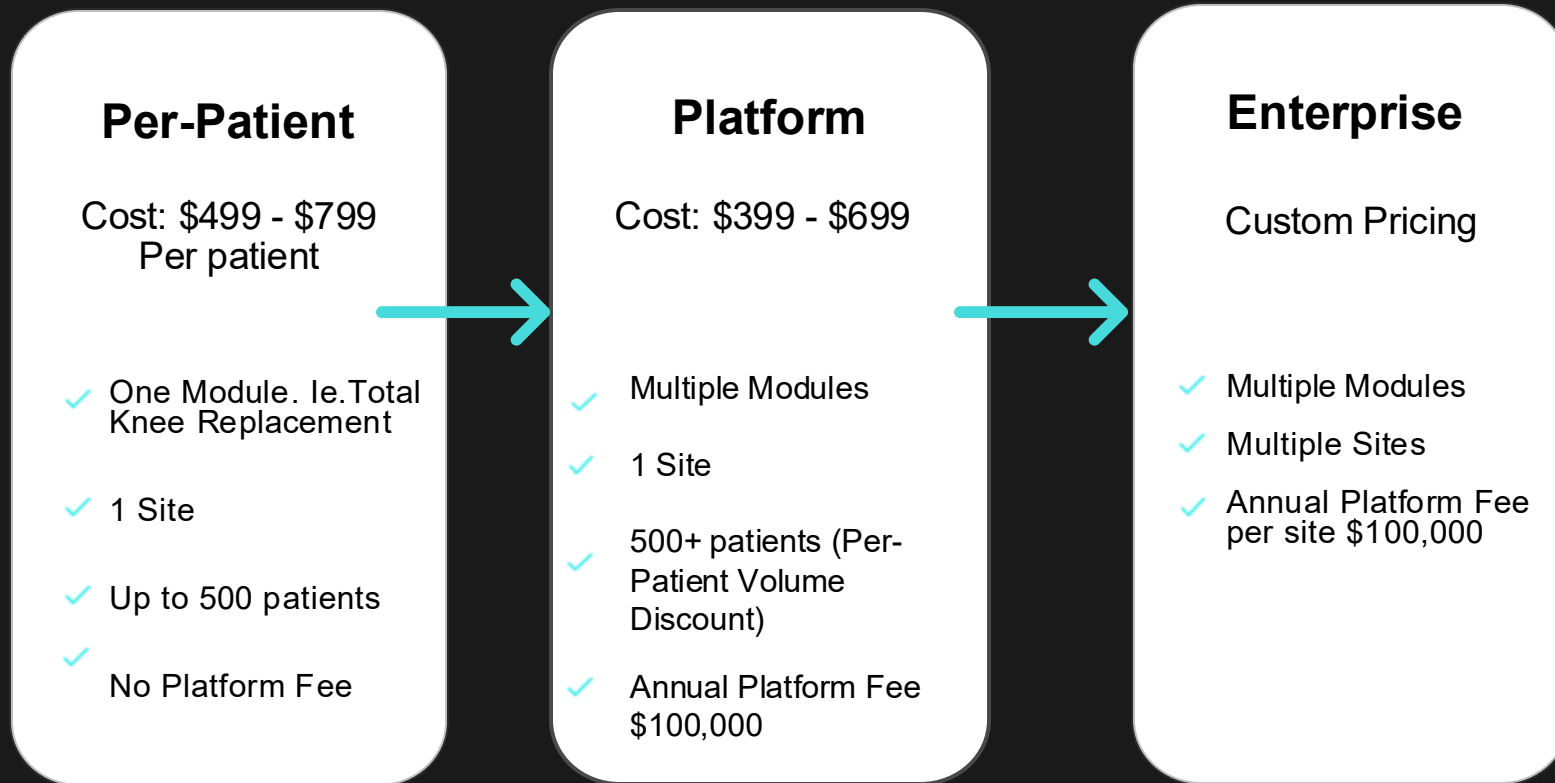

Use case: Total Knee Replacement Surgery – The cost and duration of care delivery.

Peak Medical provides the longest duration of care at the lowest cost; a critical benefit as 100% of patients require >6 weeks to recover from this surgery.

	Traditional Rehab	Peak Medical
Treatment Duration	No pre-operation care 6 weeks post-operation	6 weeks pre operation care + 3 months post operation care + paid extension of care option
Health System Burden	High. Restricted by in clinic treatments. Expensive. Limited scale	Low, off site at-home access (unlimited scale)
Cost to Customer (Hospital)	\$9500 AUD (Recover in-hospital)	\$499-\$799 AUD (Recover at-home)

CUSTOMER PRICING

A transitional model that grows with our customer (Health Fund, Hospital, Self Insurer) requirements: The Customer starts on a pay per-patient model. Then moves to a Platform model once they need to use more modules. When modules and sites expand, we transition the customer to an enterprise solution.

Transitional Model Advantage:

- Easier Initial Adoption: Lower financial barrier for hospitals.
- Revenue Growth as Usage Expands: Generate revenue per patient while scaling.
- Stronger Proof of Value: Hospitals measure impact before full commitment.
- Encourages Expansion: Natural transition from one condition to multiple.
- Flexible for Different Hospital Sizes: Supports both small and large hospitals
- Per customer on annual contract providing ARR. The contract value is comprised of the forecast of patients the customer will treat +/- the annual platform fee.

Above: Australian Pricing Model (Pricing model differs for APAC regions as factored into full financials)

We have a clear path to impact, starting with Hospitals, Insurers and Health funds.

Phase	Milestone	Key Actions
2026	Australia & India Total Knee Module Entry (March market entry)	Launch to National Hospital Group and one Insurer Group in Australia and St. John's India. Expand to Apollo Hospital (2 sites). Regulatory approval.
2027	Total Knee, Total Hip and OA Module Market Expansion	Australia National expansion with planned module release. Expansion in India to Health Fund Insurers in Pipeline.
2028	Total Knee, Total Hip and OA Module Market Expansion	Broaden to all orthopaedic patients in target hospitals
2029	Insurer Scaling	Expansion of Insurer model that will make up 70% of ARR
2030	Targeting Total 823,000 Patients/Users from 2025 - 2030	India Expansion & insurer-backed mass adoption. Open source data growth strategy or exit to targeted acquirer who seeks instant market uptake across APAC will be considered from 2030.

TRACTION 2025

2024 AWARDS & RECOGNITION

1 Validation & Product Market Fit

- Gold standard VICON Validation - Australian Catholic University, confirms Peak Medicals platform is accurate.
- Ramsay Hospital Research Foundation Support
- St Johns Hospital - Patient Pilot, 2 Site Clinical Trial
- Supported by Austrade to support Indian Market entry
- Completed: Remarkable and UNSW Health 10x Programs

2 Data & Compliance

- Vanta compliance platform utilised for Hospital and Cyber compliance
- Class 2A Therapeutic Goods of Australia - January Approval
- Product developed to deploy in June Trials – Total Knee Replacement Module Developed
- Industry Growth Grant \$250,000k
- Progress Customer Pipeline

3 June - January 2025 - Australia & India

- Advisory set in place. Group Structure set up for Australia, India entry
- Patient trials commence with Total 150 Patients across 2 Hospital Groups in Australia + 2 Hospital Sites India
- The George Institute (India) with Apollo Hospital Research Partnership Commences
- Product refinement and further enhancements from trial feedback

4 March 2026 In Market

- Launch to market with National Hospital Group in Australia. Launch to Insurer in Australia. Launch to Insurer and Hospital in India. With Total Knee Replacement, Total Hip and Osteoarthritis (conservative management) modules.

Pipeline for Peak Medical to achieve forecast users & revenue.

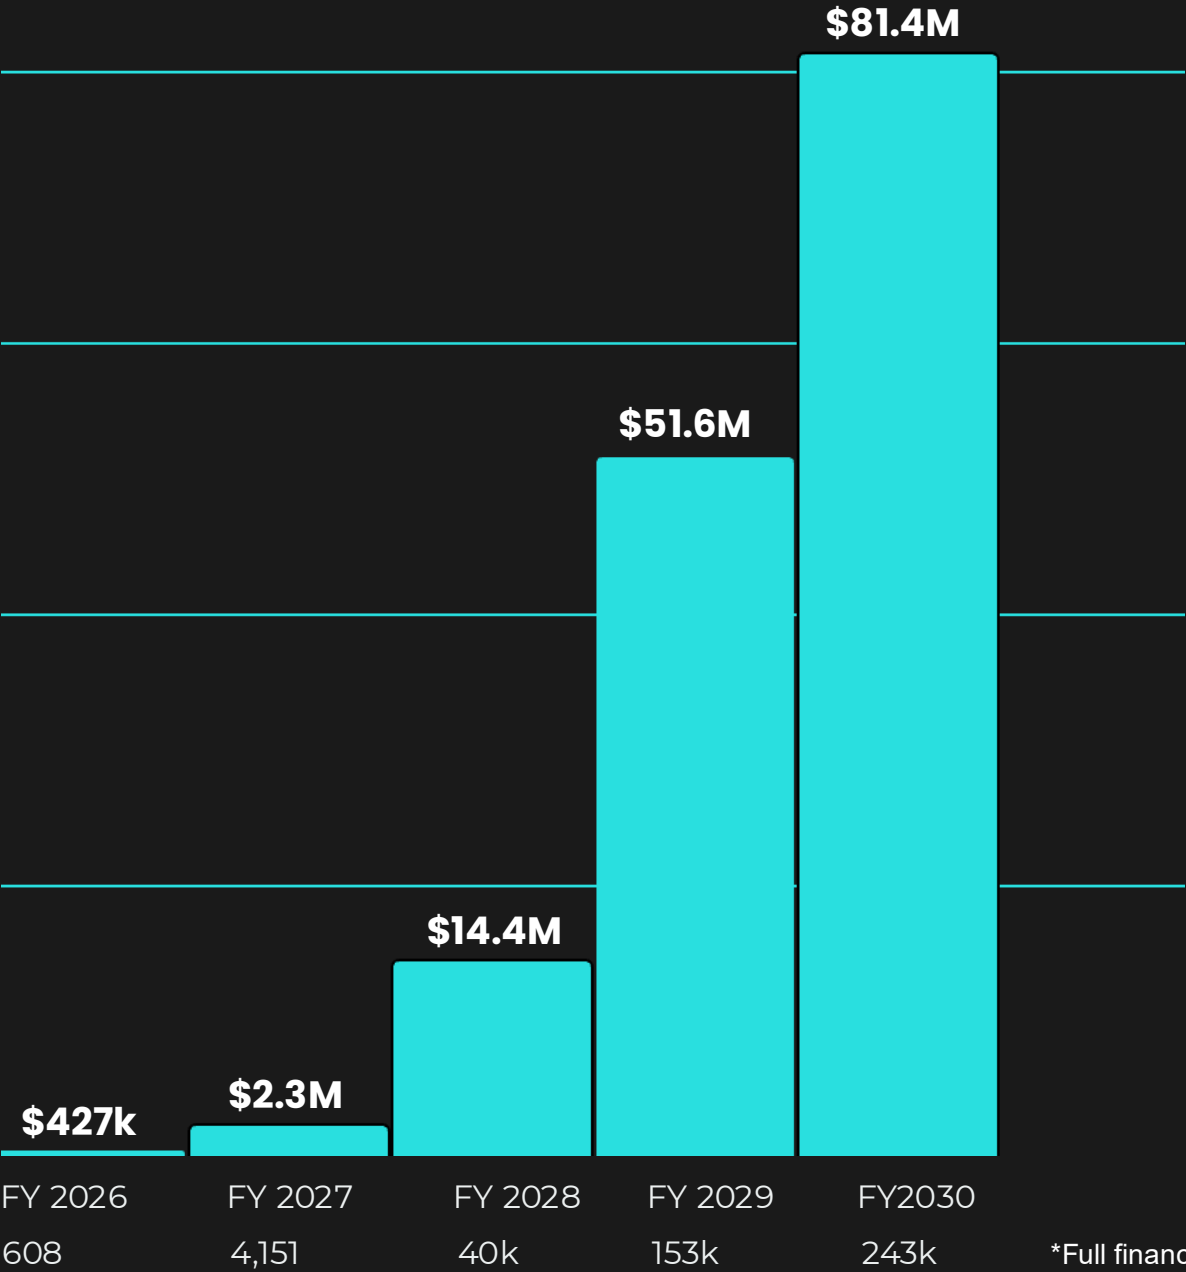

We have positioned to sell into three core customer segments: Hospitals, Self-Insurers, and Health Insurers. Starting with an Australian Hospital Group in June, we will also engage a Health Fund and a Self-Insurer in Australia. We will leverage our Australian customer insights, product usage, Indian price model, multi language features and user stories from Australia (+our Indian trial data) to accelerate traction in India. Pilot trials begin at St Johns Hospital India in August, with the Apollo Hospital Group, product pitching first to Apollo Chennai and Apollo Hyderabad in May.

ARR FY25 to FY2030

Launching to the Australian and India market with 3 modules .
With sales to our pipeline of self insurers, health funds and hospital Peak is targeting an ARR of \$427k in FY26. And \$81.4M in ARR between Australia and India in FY30 serving a total of 441k Users by June 2030.

From FY2030 there is potential to exit via a targeted acquisition from a competitor with the value proposition that they will secure the APAC market and future growth. Potential acquirers include Hinge Health, Sword Health and Stryker.

PROGRAMS AND NON DILUTIVE FUNDING FROM

COMPETITORS

Peak Medical is the most complete product for digital therapeutic rehabilitation leading the gap across the APAC market.

Competitor	Focus Area(s)	Strengths	Limitations
Peak Medical	Real-time AI Digital Platform Clinical Grade No Hardware	Medical-grade Software (TGA), proprietary computer vision to detect movement & Issues (novel). Novel system that mimics supervised clinical care in the home. Low-cost substitute program. Highly scalable. APAC region focus and lead. In-house design + proprietary training data sets.	Novel symptom detection technology requires higher regulatory class – has led to a slower market entry compared to a non-regulated product.
Hinge Health	Digital Musculoskeletal Care	Clinically validated, comprehensive care plans, Self Insurer US market	US-focus. Limited to Exercise coach features not clinical grade. Likens a personal trainer, not clinical therapist.
Kaia Health	Digital Physical Therapy	Advanced AI, interactive, cost-effective	US-European focus. Focus on chronic pain, limited clinical/grade integration
Sword Health	AI-Driven Digital Musculoskeletal Care	Wearable sensors, human therapist oversight, computer vision (new)	US-European focus. 2024 product Phoenix likens a personal trainer, not clinical therapist.
PearWell	Pre-surgery & recovery	Comprehensive prep, reduces inpatient stay	Limited scalability, low tech integration

We have identified key risks and have proactively implemented relevant mitigations

Risk Type	Risk Description	Mitigation Plan	Rating
Market	Low adoption due to introduction of new technology to traditional health systems and older patients	The technology features have a user-friendly interface designed and tested for high adoption among the 60–80-year-old segment. Influential healthcare professionals and industry leaders serve as advisory members, championing the system’s benefits for patient care. Market trends show a growing demand for digital-first care pathways to address cost and waitlist barriers, positioning us to deliver in this gap between traditional healthcare and the future.	Low risk, High impact
Clinical	Ongoing product efficacy and patient safety	Expert-developed and evidence-based clinical data underpinning Peak Med; post-market incident reporting and monitoring.	Low risk, High impact
Regulatory	Compliance and Regulatory	Regulatory and IP experts already consulting, thorough documentation in preparation for audits and compliance applications, quality management system is in place	Medium Risk, High Impact
Technical	Platform downtime, data breaches	Quality assurance embedded in product development roadmap, security protocols in place, regular user and platform testing, technical support SLAs, escalations and teams identified	Low Risk, Medium Impact
Cybersecurity	Potential data breaches or cyberattacks on sensitive data	Implementation of robust encryption, regular security audits, continuous monitoring, and adherence to industry standards (ISO 27001, compliance to Australian Privacy Principles (APPs and Australian Cyber Security Centre (ACSC) Essential 8). We will hire a dedicated cybersecurity team member to ensure proactive risk management and rapid response to threats.	Medium Risk, High Impact

INTELLECTUAL PROPERTY
