INTRODUCTION

Innovating Clean Energy from Wet Waste

- Founded in 2021, Bengaluru-based startup focused on decentralized biogas solutions
- Flagship product “Vajra – The Digester” converts organic waste into clean cooking gas & organic fertilizer
- Strong sustainability impact: reduces landfill waste & greenhouse gas emissions
- Positioned for rapid scaling in India’s growing clean energy and circular economy markets

I PROBLEMS WITH CONVENTIONAL WASTE DISPOSAL

In India, wet waste makes up about 53.7% of total municipal waste.

Transportation costs and emissions.

Methane emissions contribute to climate change.

Landfills are reaching capacity, causing pollution and health hazards.

Inefficient waste segregation leads to lost opportunities for recycling and energy production.

Waste to Energy Conversion Growth

ENVIRONMENTAL IMPACTS

- Unmanaged waste results in soil and water contamination, threatening ecosystems and public health.
- Landfills emit significant volumes of methane, a potent greenhouse gas driving climate change.
- Overflowing and poorly managed landfills contribute to air pollution and associated health risks.

ECONOMIC BURDEN

- Waste collection, transportation, and landfill operations incur substantial costs for municipalities.
- Valuable organic waste is lost, foregoing opportunities for energy recovery and nutrient-rich compost production.
- Pollution-related illnesses lead to increased healthcare expenditures, further straining public resources.

THE OPPORTUNITY

ECONOMIC ADVANTAGES

- Significant cost savings through reduced waste collection and transportation expenses.
- New revenue streams from biogas production and organic compost sales.

ENVIRONMENTAL IMPACTS

- Mitigation of methane emissions and lowered reliance on landfill sites.
- Enhanced environmental quality through pollution reduction and healthier ecosystems.

SOCIAL VALUE CREATION

- Generation of employment opportunities in decentralized waste management.
- Improved public hygiene and cleanliness across urban and rural communities.

STRATEGIC BENEFITS

- Eliminates costly transportation and landfill disposal logistics.
- Substantially reduces carbon footprint, aligning with sustainability goals.
- Unlocks valuable byproducts driving circular economy initiatives.

| SOLUTION

Anaerobic Digestion Process

THE MARKET

TAM

India's Total Waste Generation

- 62 million tons/year (2021) → projected 165 million tons/year by 2030
- 4% annual growth driven by urbanization, consumption
- Key driver: regulatory push and environmental urgency

SAM

Wet Waste Segment

- 53.7% of total MSW → ~33 million tons/year today → ~88 million tons/year by 2030
- Opportunity in organic/biodegradable waste for biogas, compost, energy recovery
- Rising demand for decentralized processing solution.

SOM

Untreated Wet Waste + Carbon Credits

- 50% of waste untreated → ~16 million tons/year wet waste unprocessed
- Potential to generate:
 - Biogas (methane capture) → energy revenue
 - Organic slurry → compost/fertilizer
 - Carbon credits → monetizable CO₂-equivalent offsets
- Tapping into global voluntary carbon markets (Verra, Gold Standard, etc.)

| PRODUCT

Your Partner in Sustainable Waste Management

- Compact footprint: fits within 5.5 sq. ft.
- Operates without electricity for daily use.
- Processes up to 5 kg of wet waste daily (1.5 tons annually).
- Generates 1000 liters of methane per 5 kg of wet waste.
- Produces 5 liters of organic slurry daily, collected by Harithavani.
- Easily deployable in farms, households, and commercial settings.
- Light Weight
- Built with HDPE material for long life

| STRATEGIC BENEFITS & MARKET POTENTIAL

SCALABLE & DECENTRALIZED SOLUTION

Suitable for diverse settings from urban households to rural farms, enabling wide adoption.

ENERGY INDEPENDENCE

Reduces reliance on conventional fuels by providing clean, renewable biogas.

CIRCULAR ECONOMY INTEGRATION

Converts waste into energy and organic fertilizer, closing resource loops and enhancing sustainability.

STRONG MARKET DEMAND

Rising urbanization and waste generation create significant growth opportunities in waste-to-energy solutions.

SUPPORTIVE ENVIRONMENT POLICIES

Government incentives and increasing environmental regulations favor biogas adoption and renewable energy projects.

FINANCIALS

Metrics	Year 1	Year 2	Year 3	Year 4	Year 5
Revenue	5.27	25.08	68.36	120.11	203.05
COGS	4.25	17.79	46.59	79.80	132.42
Gross Profit	1.02	7.29	21.76	40.31	70.62
EBITDA	-0.65	5.47	19.79	38.16	68.29
PBT	-0.82	5.30	19.63	38.01	68.14

COMPETITORS

COMPANY	SEALED TECH	FLOATING DRUM	CAPACITY	OEM	FEED	COST	PACKAGE	INSTALLATION	WARRANTY
Harithavani Renewable Systems	Yes	No	1 m ³ /day	Yes	5 kg/day	₹40,000	Digestor, biogas balloon, single burner	Company installed	10 years
Royal (India) Techno Projects Pvt Ltd	No	Yes	1 m ³ /day	No	5 kg/day	₹53,000	Burner, bio-digester tank (no balloon)	Self-installation	1 year
Natfrendz Technologies Pvt Ltd	No	Yes	1 m ³ /day	No	5 kg/day	₹45,000	Single burner, works without balloon	Self-installation	5 years
Get Green Bio Energy	No	Yes	1 m ³ /day	No	3 kg/day	₹22,000	Pipe, burner, floating drum; tech engineer provided; user supplies 1500 kg cow dung, labor required	Assisted (engineer + user)	2 years warranty + 2 years service
BPG Renewables	No	Yes	1 m ³ /day	No	3 kg/day	₹30,000	Pipe, stove, digestor (floating drum, open)	User arranges cow dung, labor	25 years
SMR Green Energy	No	Yes	1 m ³ /day	No	5 kg/day	₹50,000	Floating drum; user arranges 300 kg cow dung, labor	User-supplied materials	-
Vioq Renewable System	No	Yes	1 m ³ /day	No	5 kg/day	₹15,000	Underground install; extra GST/transport; includes IBC tank, trap, burner, valve, 4m pipe	User arranges cow dung, labor	-
Koshish Sustainable Solution Pvt Ltd	No	Yes	1 m ³ /day	No	10 kg/day	₹22,000	Floating drum	Not detailed	-

OUR ASK

3 Crores

USE OF FUNDS

Why Invest Now?

Massive, Underserved Market

- India generates 33M+ tons of wet waste annually, yet over 30% remains unprocessed
- 500+ Tier I & II cities lack effective decentralized waste infrastructure

High Impact, High Scalability

- Eliminates landfill dependency, cuts methane emissions, creates local jobs
- Replicable across urban and rural geographies with rising waste problems

Perfect Timing

- Sector growing at 9–11% CAGR
- Waste and climate policies are creating opportunities for scalable cleantech solutions

First-Mover Advantage in Decentralized Biogas

- Proven, plug-and-play biogas units with low capex and minimal operational complexity
- Strong traction across urban homes, institutions, and commercial kitchens

Government-Backed Rollout

- Partnering with Government of Karnataka to launch 'HarithaAvani' in emerging areas
- Facilitating community-level waste-to-energy infrastructure with public sector support
